

Configuring AVG 2011 to work with RE/Xplorer

AVG 2011 is the latest version of the AVG Free Antivirus program that is available for download. If you currently have AVG 9.0 and try to update it, you will automatically be forced to upgrade to 2011. Follow these instructions to make AVG 2011 compatible with RE/Xplorer.

From the AVG main menu, double click the LinkScanner button.

Remove the check in 'Enable Surf-Shield' and click the Save Changes button.

Close AVG and make sure to delete your temporary internet files.

RE/Xplorer should now work normally. If you still have problems, please contact GFC CMLS technical support.
